

EDCTP - European and Developing Countries Clinical Trials Partnership

18.11.2019 | Bildungs- und Forschungskooperation

<https://www.edctp.org/>

Launched in 2003, EDCTP aims to support collaborative research that accelerates the clinical development of new or improved interventions to prevent or treat HIV/AIDS, tuberculosis, malaria and other poverty-related infectious diseases, including neglected infectious diseases and emerging or re-emerging infectious diseases, prevalent in sub-Saharan Africa.

EDCTP's second programme (2014-2024) supports all clinical trial phases (I-IV) including health services optimisation research. Research and regulatory capacity development remain integrated in the research funding strategy in order to strengthen the conditions for conducting clinical research in sub-Saharan Africa.

The EDCTP programme will be executed through partnerships between European and African institutions and researchers in collaboration with the pharmaceutical industry and like-minded organisations.

The programme is implemented as part of the European Framework Programme for Research and Innovation, Horizon 2020 (2014-20) and governed by the participating African and European countries.
