

Japan: KEK - High Energy Accelerator Research Organization

10.10.2018 | Forschungseinrichtungen und -infrastruktur

<http://www.kek.jp/en/>

Scientists at KEK use accelerators and perform research in high-energy physics to answer the most basic questions about the universe as a whole, and the matter and the life it contains.

KEK was established in 1997 in a reorganization of the Institute of Nuclear Study, University of Tokyo (established in 1955), the National Laboratory for High Energy Physics (established in 1971), and the Meson Science Laboratory of the University of Tokyo (established in 1988).
