<http://www.nasonline.org/>

The National Academy of Sciences (NAS) is a private, non-profit society of distinguished scholars.

Established by an Act of Congress, signed by President Abraham Lincoln in 1863, the NAS is charged with providing independent, objective advice to the nation on matters related to science and technology. Scientists are elected by their peers to membership in the NAS for outstanding contributions to research.

The NAS is committed to furthering science in America, and its members are active contributors to the international scientific community. Nearly 500 members of the NAS have won Nobel Prizes, and the Proceedings of the National Academy of Sciences, founded in 1914, is today one of the premier international journals publishing the results of original research.

The three Academies - National Academy of Sciences (NAS), National Academy of Engineering (NAE) and the National Academy of Medicine (NAM, formerly the Institute of Medicine) - work together as the National Academies of Sciences, Engineering, and Medicine to provide independent, objective analysis and advice to the nation and conduct other activities to solve complex problems and inform public policy decisions.
