Erscheinungsdatum: 10.12.2021 | Länderberichte und -studien

The OECD Reviews of Innovation Policy offer a comprehensive assessment of the innovation system of individual OECD countries and partner economies, focusing on the role of government. They provide concrete recommendations on how to improve policies that affect innovation performance, including R&D policies. Each review identifies good practices from which other countries can learn.

The transition towards a knowledge-based society – where value creation, the resolution of societal challenges and the well-being of society at large will be based on the production, diffusion and implementation of knowledge – is becoming an imperative. This is recognised within the national development strategy which formulates the objective of attaining 'Smart Kuwait' by 2035. Such a transition is challenging and can only be achieved through the build-up of appropriate governance of the STI system with adequate institutions such as a Ministry and a professional agency with a mandate for research and innovation.
