

Europe meets USA 2022: Digital workshop for European and U.S. life science companies

https://www.ivam.de/events/europe_meets_usa_2022_digital_?lang=en

Duration: 30.06.2022 City: online

The event „Europe meets USA 2022 - Microtechnologies as a Key Enabler for Life Science Applications“ focusses on cooperations between component manufacturers, equipment manufacturers and users from Europe and the US, joint R&D projects and the exchange of experience on the challenges of the respective markets. Presentations and discussions will address current issues relating to microtechnology and microtechnical products for life science applications. The aim is to establish effective contacts.

Participants receive useful information for the internationalization strategy of their companies, e.g. on legal and regulatory framework conditions as well as on intercultural aspects. In best-practice examples, companies from the U.S. and Europe show how a successful market entry can be achieved. International medical technology companies will present themselves in a pitch session. During interactive networking, there will be the opportunity to exchange contact data and hold concrete discussions.

The event is aimed at medical technology companies along the entire value chain: from technology developers, component manufacturers, software, testing and analytics companies to medical device manufacturers. The virtual workshop will be organized by the IVAM Microtechnology Network on the afternoon of June 30, 2022.
