Fördermöglichkeiten für deutsch-indische Grundlagenforschungsprojekte in den Lebenswissenschaften

https://www.dfg.de/foerderung/info_wissenschaft/internationaler_bezug/info_wissenschaft_20_25/index.html

Stichtag: bis zum 28.02.2021, eingehende Vorschläge werden fortlaufend geprüft | Programmausschreibungen

Das indische Department für Biotechnologie (DBT) und die Deutsche Forschungsgemeinschaft (DFG) nehmen ihr offenes synchronisiertes Förderprogramm für Projekte der Grundlagenforschung in allen Bereichen der Lebenswissenschaften wieder auf. Teams aus indischen und deutschen Forschenden können eine Finanzierung für integrierte indisch-deutsche Projekte mit einer Dauer von bis zu drei Jahren beantragen. Vorschläge können bis zum 28.02.2021 jederzeit – stets bei DFG und DBT parallel – eingereicht werden.

The Department of Biotechnology (DBT) and the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation) wish to inform the Indian and German scientific communities that, effective immediately, it is possible for teams of Indian and German researchers to seek synchronised funding for integrated Indo-German cutting-edge fundamental research projects proposing innovative approaches in the academic disciplines covered by the Department of Biotechnology (DBT), Ministry of Science and Technology, Government of India, with a duration of up to three years.

Since this programme addresses all fields of the life sciences, interested applicants may note that it is also suitable for Indo-German projects about epidemics or pandemics such as the current SARS-CoV-2 pandemic. Please note that in line with the general orientation of this programme, only proposals describing fundamental research projects will be considered. This excludes, for example, clinical trials or applied diagnostics. If you are unsure about whether a given project would count as fundamental research, please contact DBT and/or DFG before you write and submit a proposal.

It is important for applicants to note that DBT and DFG have not earmarked a special budget for the joint projects to be funded within this funding opportunity. The proposals will be evaluated separately by DBT and DFG within the respective national competitions on the basis of the projects' scientific merit/quality, the justification for scientific collaboration and the qualifications as well as the compatibility of the participating team members.

The results of the review process will be shared between the agencies. Funding will be granted for only those proposals where both DBT and DFG recommend funding. Unilateral funding of only one part of a joint initiative will not be possible. DBT and DFG aim to review each proposal within nine months from submission.

Submission of proposals under this open funding opportunity will be possible until 28 February 2021. Please note that this is not a deadline – project proposals will be reviewed as soon as they are submitted, and early submissions are encouraged. DFG and DBT may extend the programme beyond the provisional end date given.
