Erscheinungsdatum: 20.04.2017 | Länderberichte und -studien

The OECD Reviews of Innovation Policy offer a comprehensive assessment of the innovation system of individual OECD countries and partner economies, focusing on the role of government and concrete recommendations to boost innovation performance and R&D policies.

Costa Rica's successful economic performance and social achievements realised over the last three decades are widely acknowledged. GDP per capita has steadily increased at higher rates than in most Latin American countries as the economy has evolved along its development path from a rural and agriculture-based to a more diversified economy integrated in global value chains. But Costa Rica faces challenges and must enhance and broaden the basis for productivity growth by strengthening its innovation system and enhancing the role of science, technology and innovation in addressing its national development Goals.
