Erscheinungsdatum: 09.06.2017 | Länderberichte und -studien

The OECD Reviews of Innovation Policy offer a comprehensive assessment of the innovation system of individual OECD countries and partner economies, focusing on the role of government and concrete recommendations to boost innovation performance and R&D policies.

Strengthening and lifting Finland's innovation system out of a period of uncertainty requires a coherent and unified new vision for science, technology and innovation (STI), renewed investment and policy instruments. This vision should be oriented towards renewal tackling societal challenges and developing new knowledge-based competitive advantages at global scale. Success calls for better co-ordination and co-operation among policy actors and national and regional-levels, and further internationalisation.
