Erscheinungsdatum: März 2022 | Strategiedokumente

The report "Opportunities and Actions for Ocean Science and Technology (2022-2028)" summarizes the existing "Science and Technology for America's Oceans: A Decadal Vision (2018-2028)" for a broad audience and connects the five priority goals to the cross-cutting themes of climate change, resilient ocean science and technology infrastructure, and a diverse and inclusive blue workforce, all of which include connections to racial justice and equity. This document aims to enable decision-makers to better incorporate the Federal government's current key priority topics into ocean science and technology (S&T) decision-making and implementation.

The White House released the report by the Subcommittee on Ocean Science and Technology (SOST) of the National Science and Technology Council (NSTC) in March 2022.
