

## USA: Portal für innovative Ansätze zur Naturkatastrophenbewältigung

13.03.2015 | Innovation aus der Praxis

 <http://www.data.gov/disasters>

Die U.S.-Regierung ruft ihre Bürger dazu auf, weiterhin innovative und kreative Ideen für Technologien und Maßnahmen zur Naturkatastrophenbewältigung zu veröffentlichen. Nach Hurrikane Sandy (2012) wurde die Initiative des Weißen Hauses „Innovation für Katastrophenbewältigung und Wiederaufbau“ ins Leben gerufen und mit ihr ein Onlineportal, auf dem Bürger aus allen Branchen Ideen und Daten zur Katastrophenbewältigung eingeben können.

### Unleashing Innovation for Disaster Response and Recovery

Each year, emergencies and natural disasters challenge the communities and test readiness of the USA. Strengthening the Nation's resilience is critical - the best work is done collaboratively as a shared responsibility with all community members contributing their talents, unique skills, perspectives, and needs.

In the wake of Hurricane Sandy, the Administration established The White House Innovation for Disaster Response and Recovery Initiative to find effective ways to use technology to empower disaster survivors, first responders, communities, and all levels of government with critical information and collaboration resources.

Over the past two years through ongoing dialog and action, the U.S.-capacity for innovative disaster response and recovery has continued to grow. Results include [major commitments from the public and private sector](#), the first [hardware hackathon for disaster preparedness held in support of the Initiative](#), numerous workshops, and the launch of [disasters.data.gov](#) as the Initiative's first major online presence.

This innovative community is constantly seeking new ways to collaborate and leverage the creativity, social entrepreneurship, resourcefulness, and ingenuity of individuals and organizations to advance and strengthen national preparedness. Whether someone is a data steward who can [unlock information and foster a culture of open data](#), an innovator who can [address disaster preparedness challenges](#), or someone ready to [join the "Innovation for Disasters" movement](#), everyone is welcome to the combined team.

With [America's PrepareAthon](#) fast approaching next month, the U.S. encourage everyone to share how technology and innovation are used to strengthen preparedness by emailing [disastertech\(at\)ostp.gov](mailto:disastertech(at)ostp.gov). It is planned to highlighting some of the stories on the April 30 National Day of Action where governments, businesses, and individuals are encouraged to take some action on that day to prepare themselves to respond to emergency situations.
